Natural Libido And Performance

Herbs For Men and Women

Clinical studies prove that certain herbs can enhance sexual performance in men and increase arousal, libido and genital sensitivity in both men and women.

Throughout the years many cultures have used natural herbs for their sexual tonic effects, and in recent years many of these claims have been substantiated through controlled, clinical investigations.

In the normal aging process the decline in sex hormone levels and the declining number of sensory nerve endings in the genitalia region often contribute to reduction in sex drive, arousal capabilities, climax and intensity of pleasure-full sensations. As such, many adults are seeking natural methods to maintain and/or restore various aspects of sexual performance and sensation. An herbal supplement containing a combination of performance and sensitivity-enhancing herbs is an important consideration in this regard.

Adëeva SensaGen contains a potent combination of herbal compounds whose active constituents are known to enhance sexual desire and sexual capability in both men and women, as supported by human clinical trials. These herbal compounds have been used individually for many years by health practitioners in various countries as therapies for low libido and sexual dysfunction. In SensaGen, the synergistic effects of these herbs can help maximize, restore and prolong sexual desire, arousal and performance, helping to combat these problems naturally, maintaining and restoring important features of your quality of life.

Clinical Studies Prove The Safety and Effectiveness of These Herbs:

Studies show that active constituents in the herb Tribulus Terrestris increase blood flow to the male and female genitalia by releasing nitric oxide from the lining of blood vessels and nerves. This results in increased blood flow to the genitalia (this is similar to how Viagra works – by elevating nitric oxide levels), which increases male erection ability and provides more blood engorgement of female genitalia, increasing sensitivity. Tribulus Terrestris can be viewed as a gentler, safer, version of prescription drugs used to manage erectile dysfunction in this respect, and can be used by women to heighten sexual response and sensitivity.

The herbs Damiana and Avena Sativa are known to increase sensitivity of the genitalia, allowing easier and faster arousal and climax capabilities.

Clinical studies indicate that Muira Puama can increase sex drive, fantasies, overall performance and satisfaction.

Studies using Maca and Horny Goat Weed (Epimedium) have shown their effects on enhancing libido and performance in men, and on libido-enhancement in women.

Adëeva SensaGen is a perfect natural solution to combat reduced sexual performance, arousal and libido problems associated with the aging process, and to supercharge an already gratifying relationship.

Ask your health practitioner if Adëeva SensaGen may be suitable in your case.
