

Make your arteries a NO-PLAQUE Zone

Reduce your risk of heart disease and stroke

Many human studies have shown that lowering cholesterol, especially LDL, reduces the risk of heart disease and stroke.

*In conjunction with dietary practices, two important natural substances — **GUM GUGGUL** and **ARTICHOKE LEAF EXTRACT** — can help to lower LDL cholesterol and improve the ratio of “good cholesterol” (HDL) to “bad cholesterol” (LDL).*

They help to decrease the risk of plaque formation by reducing the oxidation of LDL that might restrict blood flow through the blood vessels, without causing liver, muscle or kidney damage.
