

# Look after your Joints

You use your Joints hundreds of times a day

- Keep them Healthy & Functioning -

Are you aware that after age 40 our bodies decrease production of glucosamine, which leads to cartilage degeneration and ultimately osteoarthritis. Now that you know, this common condition of aging can be prevented with a small amount of glucosamine and

some simple anti-inflammatories to help slow this aging process considerably. Anyone over 40 years of age should take as a preventive 1 or 2 capsules of *Adëeva Glucosamine Joint Formula* daily to ward off cartilage destruction and keep you active well into your golden years!

*Speak to your Healthcare professional about Adëeva's*  
***Glucosamine Joint Formula***

*Contains a purified and stable grade of glucosamine sulfate along with three natural herbs that support joint health and block key steps associated with the inflammatory process*
