

Essential H.A.

Clinically Proven To Reverse Wrinkles, Crow's Feet And Fine Lines

Adeeva Essential H.A. is an all-natural, vegan-based product, that is clinically proven to reverse fine lines, shallow wrinkles and crow's feet, and slows the aging process of the skin.

How It Works

Adeeva Essential H.A. contains a proprietary ingredient known as Hydrexelin – a unique form of hyaluronic acid, which is microencapsulated by second-generation liposomes. The topical application of Hydrexelin replenishes the skin's natural levels of hyaluronic acid, which decline as we age.

After age 20 the skin makes less hyaluronic acid, such that by age 50 the skin contains 50% less hyaluronic acid than was present at age 20. Hyaluronic acid is the magnet that absorbs water and holds it in the skin, keeping it hydrated. As we get older the decline in hyaluronic acid allows moisture to escape from the skin. In turn, the skin becomes dehydrated and shrivels-up. This process contributes to the development of wrinkles, skin-thinning and the appearance of advanced aging.

Clinical studies show that Hydrexelin penetrates down to deep skin layers, replenishing the hyaluronic acid the skin no longer makes for itself as we age. With daily application of Adeeva Essential H.A. the skin regains its more youthful level of moisture, which fills in the fine lines, shallow wrinkles and crow's feet making you look years younger. Many people receive comments indicating that they look 5-7 years younger after just 2-3 months of daily use of Adeeva Essential H.A.

Other Hyaluronic Acid Products Can't Compete

Other cosmetic products containing hyaluronic acid do not produce the same results as Adeeva Essential H.A. Applying hyaluronic acid onto skin alone is not effective because hyaluronic acid is a large

molecule that cannot penetrate down to all of our skin layers. So, although some other products may contain hyaluronic acid, they do not replenish all the skin layers of hyaluronic acid and reverse facial wrinkles. Adeeva Essential H.A. is a unique, proprietary form of microencapsulated hyaluronic acid that is clinically proven to deliver hyaluronic acid to the deep layers of the skin, enabling its age-reversal effect to take hold. Hydrexelin remains the only clinically-proven form of hyaluronic acid shown to reverse facial aging. This is why it is recommended by many of North America's top plastic surgeons and skin care professionals.

All-Natural Product With No Parabens

Adeeva Essential H.A. is an all-natural, VEGAN-based product. The hyaluronic acid in most other cosmetic products is derived from rooster comb. Adeeva Essential H.A. does not contain any parabens and all of its natural ingredients meet the standards of the European Cosmetics Association, which have the highest standards in the world for natural cosmetic products.

Clinical Applications:

To reduce facial wrinkles, crow's feet and fine lines in patients over 20 years of age (anti-aging)

Anti-aging support to reduce wrinkles, crow's feet and fine lines in patients over 20 years of age.
